Virginia Greenhouse Growers Certification
Category 10 Pesticide Review and Test
Remote Pilot's Certification Test Preparation
BQA Certification/Re-Certification
Middle School Idea Share

12:00-1:00 PM: Lunch

1:00-3:00 PM: Afternoon Workshops (Choose 1)
Floriculture - Planter Designer
Plumbing - Sprinkler Build
School Land Lab Idea Share
Vet Science - Lab Skills

Descriptions

Virginia Greenhouse Growers Certification: Dr. Joyce Latimer will review the content of the Greenhouse Operator's Training Manual in preparation for conducting the certification exam. Typically, she covers the insect and disease portions of the manual, but is flexible to meet participant needs. Teachers will be surveyed for priority topics prior to the review session. Participants must bring a laptop computer. In addition, the workshop will include time for a Q&A session. The exam can be taken online at the conclusion of the workshop.

Middle School Idea Sharing: Middle school teachers will meet to discuss successes and challenges for middle school agriculture classes.

Category 10 Pesticide Review & Test:

Come prepared to take the Cat 10 test! You need to study before this class in order to pass! Registrants will be provided with a link to sign up for Virginia Tech's Pesticide Program to help prepare. For teachers needing recertification points, additional subjects will be covered.

Remote Pilot's (FAA Part 107) Certification Test Preparation: This workshop will help teachers prepare for the FAA drone certification test. Certification is required for all but hobby drone use. Booklets, practice questions, and study hints will be provided.

BQA Certification/Re-Certification - for teachers who wish to offer the BQA High School Credential and/or the required BQA Training for Youth Cattle Working Participants. In addition to certification/re-certification, we cover the logistics and details of the BQA HS Credential Curriculum and the requirements for accessing that curriculum; talk about the testing requirements handled by Safety First; and participate in some of the hands-on activities that are provided to support the curriculum. Anyone interested in the BQA program is encouraged to attend, regardless of your certification status, as this is a new program (as of fall 2020) with a lot of changes

Continental Kennel Club

The CKC offers a complete curriculum for teachers. The curriculum is easy to use, ends in a certification test, and only costs \$300 to become qualified to offer. This workshop will give educators a chance to see all the curriculum from the CKC Canine Care and Training Level One class and certification. Participants will see digital, and paper artifacts that they can use in their own Small Animal Care class. The workshop will also share helpful tips on becoming qualified to offer the certification.

Floriculture - Planter Design: In this workshop you will get a lesson plan with hands-on activities that teach how to create planters using annual and perennial plants.

Plumbing - Sprinkler Build: You will build a sprinkler using PVC pipe and copper. In doing so you will see an example of an inquiry based lesson and cut, glue and assemble copper pipe. You will also cut, and solder copper pipe.

School Landlab Sharing: Join with other teachers to talk about land labs large and small. The discussion will include ideas for funding and student roles and responsibilities.

Veterinary Science Introduction to Clinical/Laboratory Skills of the Companion Animal: This Veterinary Science workshop will provide teachers with a hands-on experience to enhance their knowledge and skills with basic restraint techniques and equipment, utilization of laboratory equipment and understanding the importance of specific laboratory testing such as Urinalysis and Fecal Analysis.
